DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Semple, 6408307.

3. As per claim 1, Semple discloses an input means for inputting information necessary to conduct a vicinity search including at least information regarding a reference position on lines 29-31, on column 7; a display means for displaying a search result (22); an information storage means for storing at least the vicinity search data on lines 58-62, on column 4; a search means for making the vicinity search on the basis of data stored in said information storage means and information input by said input means on lines 19-60, on column 7; the search area is around a reference position input by said input means on lines 28-44, on column 7.

4. As per claim 2, Semple discloses the area or area information is of a country; administrative unit; district, or municipality on lines 50-55, on column 7.

Response to Arguments

5. Applicant's arguments with respect to claims 1 and 2 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

6. Claims 3, 16, and 17 are allowed.
7. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record does not disclose a search means for searching each category of said register points existing within a predetermined limit on the basis of each reference position input by said input means by referring to said flags representing the presence or absence of said register point data in said information storage means, and a display means for displaying each category with flags representing the presence of the register points searched by said searching means.
